Comparison of diamond quality and cutting performance:

1. Original high-grade diamonds provide superior cutting performance, resulting in smoother and more precise cuts compared to lower-quality diamonds. The use of original diamonds ensures consistent performance and longer blade life.
2. Lower-quality diamonds, often sourced from waste segments, lead to faster blade wear and less efficient cutting. This results in higher operational costs and more frequent blade replacements.
3. The cutting surface produced by original diamonds is significantly smoother and more uniform, reducing the risk of material defects and improving the overall quality of the finished product. In contrast, lower-quality diamonds create a rough, uneven surface that may require additional finishing steps.
4. The use of original diamonds is a more cost-effective long-term solution, as the superior cutting performance and longer blade life outweigh the initial higher cost.

Conclusion:

150 Original high-grade diamonds provide superior cutting performance and longer blade life.
