

**Table:**

The table shows the relationship between the number of rows and columns in a grid. The number of rows is always one more than the number of columns.

For example, a 4x3 grid has 4 rows and 3 columns. The number of rows is 4, and the number of columns is 3.

The number of rows is always one more than the number of columns.

The number of rows is always one more than the number of columns.

**Table:**

1. Universal table with 4 rows and 3 columns

2. Unique table with 4 rows and 3 columns, where the number of rows is always one more than the number of columns.

**Table:**

following table shows the relationship between the number of rows and columns in a grid.

Number of Rows	Number of Columns	Number of Squares	Number of Rectangles	Number of Triangles	Number of Circles	Number of Stars	Number of Diamonds
4	3	105	0.070	1.8	16/20	8	8
5	3	127	.080	2.0	22.23	8	10
7	3	178	0.085	2.2	25.4 / 50	8	14
9	3	229	0.110	2.8		8	18

The table shows the relationship between the number of rows and columns in a grid.

Table: The number of rows (4 rows and 3 columns) is always one more than the number of columns.
