Our factory use original high grade diamond

pk

Other factory mix second diamond selected from waste segment

Our blade cutting effect

pk

Other supplier blade cutting effect

Comparison of diamond quality and cutting performance:

1. Original high-grade diamonds provide superior cutting performance, resulting in smoother and more precise cuts compared to lower-quality diamonds. This leads to reduced wear on the blade and faster cutting times.
2. Lower-quality diamonds, often selected from waste segments, result in rougher and less consistent cuts. This increases blade wear and requires more frequent blade changes.
3. The use of original high-grade diamonds in blades leads to longer blade life and more stable cutting performance. In contrast, blades with lower-quality diamonds experience more frequent dulling and inconsistent cutting results.
4. Investing in high-quality diamonds is a cost-effective choice in the long run, as it minimizes downtime and maximizes productivity.

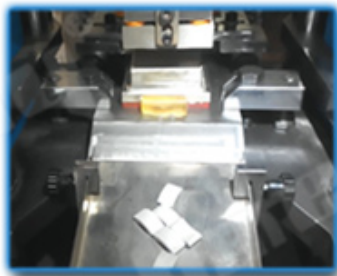

Conclusion:

Figure 1: The production process of the product

1. The raw materials are mixed and prepared.
2. The mixture is pressed into a mold under cold pressure.
3. The pressed material is then pressed into a mold under hot pressure.
4. The pressed material is then polished and packed.

本公司提供各種機械設備，歡迎各界人士垂詢。

3. 如何選擇合適的機械設備？

選擇機械設備時，應根據生產需求、設備性能、價格等因素進行綜合考慮。建議在選購前，先了解設備的技術參數和質量保證，並與供應商進行充分溝通，確保設備能夠滿足您的生產要求。
