

Segment Size: 18mm*20mm*2T
Segment Shape: Rhombus

Connection Type: Polar Magnetic System; Single Hole System

30S Rhombus Segment - 30S Rhombus Segment Size: 18mm*20mm*2T, 4000 RPM or 5500 RPM. This segment is designed for use in a single hole system. It is compatible with various motor types, including brushless DC motors, brush motors, and synchronous motors. The segment is made of high-quality material and is designed to provide a secure and reliable connection.

30S Rhombus Segment - 30S Rhombus Segment Size: 18mm*20mm*2T, 2500 RPM or 4000 RPM. This segment is designed for use in a single hole system. It is compatible with various motor types, including brushless DC motors, brush motors, and synchronous motors. The segment is made of high-quality material and is designed to provide a secure and reliable connection. (Note: The segment is not compatible with 30S Rhombus Segment Size: 18mm*20mm*2T, 4000 RPM or 5500 RPM.)

30S Rhombus Segment - 30S Rhombus Segment Size: 18mm*20mm*2T, 2500 RPM. This segment is designed for use in a single hole system. It is compatible with various motor types, including brushless DC motors, brush motors, and synchronous motors. The segment is made of high-quality material and is designed to provide a secure and reliable connection. It is also compatible with various motor types, including brushless DC motors, brush motors, and synchronous motors. The segment is made of high-quality material and is designed to provide a secure and reliable connection.

30S Rhombus Segment - 30S Rhombus Segment Size: 18mm*20mm*2T, 5500 RPM. This segment is designed for use in a single hole system. It is compatible with various motor types, including brushless DC motors, brush motors, and synchronous motors. The segment is made of high-quality material and is designed to provide a secure and reliable connection.

[30S Rhombus Segment - 30S Rhombus Segment Size: 18mm*20mm*2T, 4000 RPM or 5500 RPM](#)

30S Rhombus Segment:

30S Rhombus Segment - 30S Rhombus Segment Size: 18mm*20mm*2T. This segment is designed for use in a single hole system. It is compatible with various motor types, including brushless DC motors, brush motors, and synchronous motors. The segment is made of high-quality material and is designed to provide a secure and reliable connection. It is also compatible with various motor types, including brushless DC motors, brush motors, and synchronous motors. The segment is made of high-quality material and is designed to provide a secure and reliable connection.
