Figure 1 shows the cross-section of a grinding wheel segment. The segment is mounted on a blue metal hub. The grinding wheel material is a dark, porous structure. The segment is mounted on the hub using a single T-shaped segment. The segment is secured by a T-shaped metal piece that fits into a groove on the hub and a corresponding hole in the segment. The segment is held in place by a T-shaped metal piece that fits into a groove on the hub and a corresponding hole in the segment.

Figure 1: Cross-section of a grinding wheel segment.

Figure 1 shows the cross-section of a grinding wheel segment.

Segment Grit: 16-270# etc.
Single T Shape Segment

Two Pins Blank

Blank components are used for testing and development of new products, and are available in a variety of materials and sizes.

Blank components:

Blank components are used for testing and development of new products, and are available in a variety of materials and sizes. They are used for testing and development of new products, and are available in a variety of materials and sizes. They are used for testing and development of new products, and are available in a variety of materials and sizes.

(1) Blank components: 10 #, 20 #, 30 #, 40 #

Blank components are used for testing and development of new products, and are available in a variety of materials and sizes. They are used for testing and development of new products, and are available in a variety of materials and sizes.

(2) Blank components: 10 #, 20 / 30 #, 30 / its #, 40 #

Blank components are used for testing and development of new products, and are available in a variety of materials and sizes. They are used for testing and development of new products, and are available in a variety of materials and sizes.

Before Grinding and Polishing

After Grinding and Polishing
