QUESTION:

- 1) What is the hardness of concrete with a compressive strength of 40 MPa?
- 2) What is the hardness of concrete with a compressive strength of 100 MPa?
- 3) What is the hardness of concrete with a compressive strength of 10 MPa?
- 4) What is the hardness of concrete with a compressive strength of 5 MPa?

ANSWER:

Concrete hardness is determined by its compressive strength. The relationship between concrete hardness and compressive strength is as follows:

CONCRETE HARDNESS: 0-10000 PSI, 0-100 MPa, 0-100 N/mm², 0-100 kg/cm²
