

Introduction:

Diamond sintered profiling wheels are used for processing shaped stone, their merits are high efficiency of production, long lifespan and accuracy in shape and size. Different shapes and specifications are available upon clients' requests.

Features:

1. Shaping of various special-shaped stones with high efficiency.
2. Small metamorphose and good balance, accuracy in shapes and sizes.
3. Long lifespan and stable performance.

Specifications:

The followings are the normal specifications of our diamond sintered profiling wheels:

Product Name	Diameter(mm)	Width/Thickness (mm)	Arbor/Inner Hole (mm)	Grit No.	Applications
Diamond Sintered Profiling Wheel	Ø140-Ø350	20-160	30 50	40 60	Granite Marble Artificial stone etc.

Other specifications can be ordered by customers.
