

Introduction:

Convex polishing pads are designed to polish ogee and concave edges on stone countertops. They are also great for bird-bathes, bowls, and any other curved edges. Hook and loop backing. The pads are designed to polish bowl sinks and ogee curves for concrete, granite, marble, or other types of stones. This is a set of diamond polishing pads that every stone or concrete counter top fabricator wish to have on hand. Instead of flat faced to be used with conventional back holders, the bowl shaped diamond polishing pads are design to fit snugly onto a matching convex back holder. As a result, the diamond polishing pads can hold on to the convex back holder very tightly, preventing the convex diamond polishing pads from flying out due to high speed. Regular convex diamond polishing pads are curved on the side but flat on top. Bowl shaped diamond polishing pads, however, are spherical.

Features:

- 1. High polishing efficiency.
- 2. Long lifespan and stable performance.

Specifications:

Stone Curved Counter Tops Bowl Polishing Disc

Diameter (mm/inch)	Grit No.	Thickness (mm)	Application
80mm(3")	50# 100# 200# 400# 800# 1500# 3000# buff	2-3.5mm	Masonry
100mm(4")			
125mm(5")			

The parameters only for reference, other specifications are available upon request.
