

Diamond screw core bit

Introduction:

This is mainly used for the center diamond drill screw holes, vias, blind holes trimming, milling, high efficiency, durability, and security features. Suitable for portable drilling rig and CNC machine tools. Flexible front screw drill replacement, as required to select and adjust the drill pipe substrate, in order to achieve a change in terms of length. In addition, the screw bit worn away only need to replace the drill part, the drill pipe can continue to use the base.

Features:

1. Screw drills are available upon request to select, replace
2. Screw drill consumed without replacement matrix, cost savings
3. Can be adjusted according to the desired length, convenient and worry

specification:

The following diamond screw core bit General specifications we provide for:

Drill diameter	Drill length	Connection
20mm	25mm	M12

For some unconventional specifications drills, we also can be customized according to the specific needs of customers.
