

Introduction:

Resin bond diamond fickert abrasive is installed in the front of the polishing machine, mainly used for grinding granite and other stone large plate board surface, the surface of the tile, polished, with high efficiency, grinding and strong, easy to chipping, long life, etc. , low power (30% energy savings, cost savings accordingly) and environmental protection, can be used for processing granite and other hard stone.

Features:

1. The heat resistance and pressure resistance, long life;
2. polishing uniformity, environmental protection (as compared with ordinary grinding block slight environmental pollution);
3. Easy to use, fast, polished fast, stable quality, high working efficiency, reduce downtime facelift mold time;
4. factory direct, affordable, comprehensive and low cost.

specification:

These is normal specification of our resin bond diamond fickert abrasive :

Product Name	model	Segment height	length	granularity	Application materials
Resin bond diamond fickert abrasive	BW-RBDFA	15-20mm	L140	120 #, 220 #, 320 #, 400 #, 800 #, 1000 #, 1200 #, 1500 #, 3000 #	Ceramic tile, granite, marble and other stone
